Investigation

Where did SLA performance worsen? (last 3 months vs earlier)

	dimension	segment	tickets_after	breach_before	breach_after	res_before	res_after	csat_before	csa
0	IssueType	Technical	654	13.7	32.1	12.82	18.46	3.33	
1	IssueType	Payment	476	9.7	23.9	10.94	16.8	3.5	
2	Priority	High	713	6	18.9	7.51	9.79	3.72	
3	Priority	Critical	270	36.7	46.3	7.8	10.12	3.68	
4	Region	South	810	7	14.8	8.6	11.43	3.64	
5	Product	Hardware	487	5	12.5	7.86	9.55	3.69	
6	CustomerSegment	Enterprise	335	5.1	11.9	7.59	10.07	3.69	
7	Channel	Chat	1136	4.5	11.2	7.39	9.47	3.81	
8	Region	East	781	4.3	11	7.37	9.25	3.73	
9	Product	App	1156	4.8	11.3	7.58	9.43	3.7	

▾ Where SLA performance worsened most

Observed: IssueType = Technical: SLA breach 13.7% → 32.1%, avg resolution 12.82h → 18.46h, CSAT 3.33 → 2.96.

Interpretation: This segment shows the largest worsening and is the strongest lead for the overall decline.

Hypothesis: A capacity, complexity or process change affecting Technical tickets after 2026-07.

Next test: Check staffing, ticket complexity, releases and policy changes touching Technical.

▾ Reopened tickets and satisfaction

Observed: Reopened tickets average CSAT 2.72 vs 3.7 for others.

Interpretation: Reopened tickets are associated with poorer customer experience in this dataset.

Hypothesis: Incomplete first-contact resolution may be contributing to lower satisfaction.

Next test: Examine first-response time, issue complexity and agent/team assignment for reopened tickets.

▾ Resolution time and satisfaction

Observed: Pearson r (resolution hours vs CSAT) = -0.50; (first response vs CSAT) = -0.20.

Interpretation: Longer resolution is associated with lower CSAT. Correlation does not establish causation.

Hypothesis: Waiting time itself may reduce satisfaction, or hard issues drive both long times and low CSAT.

Next test: Compare CSAT at equal issue type and priority across resolution-time bands.

We do not claim causation: these are associations in observational data.

Alternative explanations

- Ticket mix changed (more complex issues), not agent or process performance.
- Staffing or scheduling changes reduced capacity during the period.
- A product release or policy change created new problem types.
- Survey response behaviour changed, so CSAT shifted without service changing.
